

Weekly Coal Production

Production for Week Ended:
November 24, 1990

Export/Import
Supplement

Preface

The *Weekly Coal Production (WCP)* provides weekly estimates of U.S. coal production by State. Supplementary data are usually published monthly in two supplements: the Coal Exports and Imports Supplement and the Domestic Market Supplement. This week's Coal Exports and Imports Supplement contains detailed monthly data on U.S. coal and coke exports and imports. The Domestic Market Supplement contains detailed monthly electric utility coal statistics, by Census Division and State, for generation, consumption, stocks, receipts, sulfur content, prices, and the origin and destination of coal shipments. This supplement also contains summary-level, monthly data for all coal-consuming sectors on a quarterly basis.

Preliminary coal production data are published quarterly, based on production data collected using Form EIA-6, "Coal Distribution Report." Based on 1988 data, the coal production estimation error for a quarter at the national level (i.e., the difference between the sum of the weekly estimates for a quarter and the quarterly EIA-6 preliminary data) ranges from 1 percent to 4 percent.

Final coal production data are published annually, based on the EIA-7A coal production survey. Based on 1988 data, the revision error for a quarter at the national level (i.e., the difference between the EIA-6 preliminary data and the EIA-7A final data) ranges from 0.02 percent to 0.08 percent.

This publication is prepared by the Coal Division; Office of Coal, Nuclear, Electric and Alternate Fuels; Energy Information Administration (EIA) to fulfill its data collection and dissemination responsibilities as specified in the Federal Energy Administration Act of 1974 (P.L. 93-275) as amended. *Weekly Coal Production* is intended for use by industry, press, State and local governments, and consumers. Other publications that may be of interest are the quarterly *Coal Distribution*, the *Quarterly Coal Report*, *Coal Production 1988*, and *Coal Data: A Reference*.

This publication was prepared by Wayne M. Watson and Michelle D. Bowles under the direction of Mary K. Paull and Noel C. Balthasar, Chief, Data Systems Branch. *Questions on energy statistics should be directed to the National Energy Information Center (NEIC) at 202/586-8800.*

Summary

U.S. coal production in the week ended November 24, 1990, as estimated by the Energy Information Administration, totaled 17 million short tons, 19 percent less than in the previous week, reflecting the Thanksgiving Day holiday, and 4 percent higher than in the comparable week in 1989. Production east of the Mississippi River totaled 9 million short tons, and production west of the Mississippi River totaled 8 million short tons.

U.S. coal exports in September 1990 totaled more than 10 million short tons, the highest monthly level since August 1985. This raised the total coal exported in the first 9 months of 1990 to 80 million short tons, which was 8 percent higher than in the comparable period of 1989, reflecting the increase in steam coal exports. Canada, Japan, and Italy were the three leading destinations, together receiving more than one-third of the total. Compared with the same period in 1989, shipments to Canada and Japan dropped by 4 and 10 percent, respectively, and those to Italy were virtually unchanged.

Metallurgical coal exports in the first 9 months of 1990 totaled 48 million short tons, the same amount shipped a year earlier. They remained the mainstay of U.S. coal exports, although their share of the total dropped to 61 percent from 66 percent. Japan continued as the largest importer, accounting for 8 million short tons. This was 1 million short tons less than in the first 9 months of 1989, due to competition from Australian and Canadian coal. Italy, the second-largest destination, received 5 million short tons, the same as last year. Other large importers of U.S. metallurgical coal were Belgium and Luxembourg, Brazil, and France. Total shipments to Europe were nearly 3 million short tons higher than in the first 9 months of 1989, with the Netherlands, Romania, and Turkey accounting for most of the increase. Ship-

ments to Canada were down by more than 1 million short tons because of a decline in steel production.

Steam coal exports in the first 9 months of 1990 totaled 31 million short tons, about 6 million short tons more than in the corresponding period of 1989. Canada, the principal destination, received 8 million short tons, an increase of 12 percent as compared with a year earlier. This rise was attributed to several factors: stock build-up to satisfy anticipated growth in electricity demand from Ontario Hydro, Canada's major electric utility; outages at that company's nuclear power plants due to maintenance; and purchases of low-sulfur coal from the West for power plant tests. Shipments to Europe were 4 million short tons higher than in the first 9 months of 1989, with more than half of the increase due to larger deliveries to Belgium and Luxembourg and the Netherlands. The amount shipped to Italy, the leading European destination, was relatively unchanged. Shipments to Taiwan, the leading Asian destination, were about one-third larger.

U.S. coal exports from January through September 1990 were valued at more than \$3 billion, based on an average price of \$42.61 per short ton. About half of the coal exported during the period was through the port of Norfolk, Virginia.

About 194 thousand short tons of coal were imported into the United States in September 1990. This brought total coal imports for the first 9 months of 1990 to about 2 million short tons, 10 percent less than in the comparable period of 1989. Colombia was the leading source of imported coal, accounting for more than half of the total. Canada ranked second, supplying more than one-third of the coal imported. Based on a 9-month average price of \$33.77 per short ton, total coal imports were valued at \$65 million.

¹Based on the U.S.-Canada Free Trade Agreement, as of January 1990, the U.S. Department of Commerce began reporting statistics on U.S. exports to Canada based on information on imports provided monthly by the Canadian government. For this reason the quantity and value for coal (metallurgical and steam) and the quantity for coke are no longer strictly comparable to the historical U.S. series.

²Includes countries with exports less than or equal to 50,000 short tons in 1989.

Note: Total may not equal sum of components because of independent rounding.

*Rounded to zero.

¹Based on the U.S.-Canada Free Trade Agreement, as of January 1990, the U.S. Department of Commerce began reporting statistics on U.S. exports to Canada based on information on imports provided monthly by the Canadian government. For this reason the quantity and value for coal (metallurgical and steam) and the quantity for coke are no longer strictly comparable to the historical U.S. series.

²Includes countries with exports less than or equal to 50,000 short tons in 1989.

³Average price of all coal exports in this category.

Note: Total may not equal sum of components because of independent rounding. Average price is based on the free alongside ship (f.a.s.) value. The average prices presented in this table are considered to be representative prices for coal exports and fall within the range of \$28 to \$50 inclusively.

Source: Bureau of the Census, U.S. Department of Commerce, "Monthly Report EM 522."

¹Based on the U.S.-Canada Free Trade Agreement, as of January 1990, the U.S. Department of Commerce began reporting statistics on U.S. exports to Canada based on information on imports provided monthly by the Canadian government. For this reason the quantity and value for coal (metallurgical and steam) and the quantity for coke are no longer strictly comparable to the historical U.S. series.

²Includes countries with exports less than or equal to 50,000 short tons in 1989.

³Average price of all metallurgical coal exports.

Note: Total may not equal sum of components because of independent rounding. Average price is based on the free alongside ship (f.a.s.) value. The average prices presented in this table are considered to be representative prices for coal exports and fall within the range of \$28 to \$50 inclusively.
